

Sources of Energy

Coloring Book

Energy from Food

Food gets its energy from the sun.

Our bodies need food energy to stay healthy and active.

Energy from the Wind

Wind is energy we can use!
The wind turns windmills and makes sailboats go.

Wind gets its energy from the sun!

7.
6.

Energy from Oil

Oil got
it's energy
from
the sun!

Oil is
used to make
gasoline for buses,
cars and trucks.

Oil is
burned to
make heat
and to keep
us warm

School Bus

Oil is also used to make
fertilizer, paint, plastic
and hundreds of other
items we use every day.

Energy from Wood

Wood comes from trees. Trees get their energy from the sun

Wood's energy can keep us warm and cook our food when we are camping

Energy from Moving Water

The energy from moving water can be used to generate electricity. This is known as hydropower.

Energy from the Sun

Count the apples on the tree! _____

The sun gives us light and heat

The sun gives plants energy to make food. It also powers our watch or calculator

Energy from Natural Gas

Natural gas is used to cook our food, heat our water and keeps us warm. It is even used to fuel our vehicles.

A long time ago natural gas got its energy from the sun.

Energy from Coal

Heat from burning coal is used to make electricity at power plants. In factories, coal is used to make metal.

We burn coal to get its energy.

Coal is found underground. The coal we burn today was formed from plants that lived millions of years ago.

Energy for Electricity

Electricity is a secondary energy source. The energy to generate electricity comes from other energy sources.
